Purchasing Business PRO	

Welcome to Business PRO!

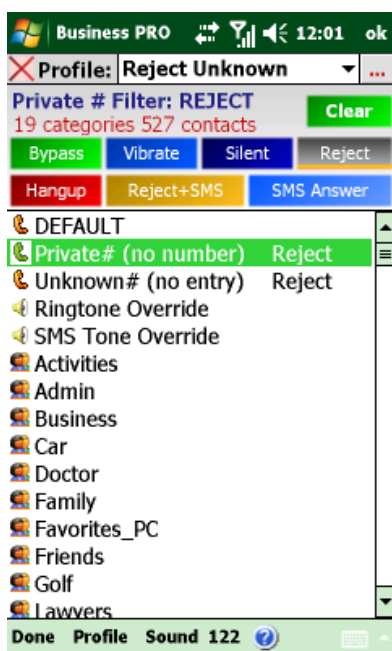

Our new Business PRO will empower your mobile experience. Make your phone more useful than ever! Integrating Advanced Automatic, Scheduled and Temporary Profiles, Distinctive Ringtones, Distinctive SMS Tones, VIP Email Tones, Contact Pictures, Call Blocking, Group Email/SMS, SMS Answering Machine and Full Screen and Business Photo Caller ID technology.

Advanced Profiles easily accessible from the Today Screen.

Advanced Photo Caller ID technology
Full Screen, Business and Large Text Photo
Caller ID with Silence, Speakerphone and
Reject+SMS buttons.

Call Blocking and advanced SMS Answering machine.

Scheduled, Temporary and Automatic profiles.

Installing Business PRO onto your phone

NOTE: Please save the installation package in case you need to re-install the software in the future.

» Installation Instructions for Windows Vista/XP/2000/NT users:

1. **Un-install the demo version** (if it is installed) by going to 'Start>Settings>Remove Programs' on the phone.
2. **Soft-reset the device** (important).
3. **Connect your phone to your computer** and establish an Activesync or Windows Mobile Device Center connection.
4. **Run the installer** - open the installation package .zip file you downloaded when you purchased the software. The package contains the Business PRO desktop installer .exe file (businesspro_...) as well as program documentation. Double-click on this file to start the installation process.
5. **Check your phone's screen** to continue the installation. If prompted to choose the installation location on the phone, select device (internal memory, required for best, most reliable performance).

Business PRO will start automatically after installation.

Congratulations! You can now open Business PRO by tapping on the Profile Picker button on the Today Screen or by accessing the Start>Programs menu on the phone.

» Apple MAC users—please go to www.pocketx.net/support to request a CAB file.

Important:

Please make sure that Business PRO is not being terminated if you use SPB plus, Wisbar or some other task manager. Configure the task manager to minimize and not close Business PRO when you press the [X] button at the top-right of the screen.

Note: Business PRO runs in the background to manage Photo Caller ID, Ringtones, Profiles and Call Filtering. When the program is running, a **Profile Picker button** is by default visible at the bottom of the device's Today Screen.

Profile Picker Button operation:

- Tap once to select a Profile or tap-and-hold to open Business PRO.

- Right icon shows active profile.

Important: Business PRO adds Advanced/Call Filtering profiles to your phone.

Advanced Profiles control ring volume, ring type and system volume on the phone.

Select profiles on the Today screen by tapping on the Profile Picker Button or inside Business PRO.

To customize profiles tap Profiles>Manage Profiles in Business PRO.

Un-installing the demo or full version of Business PRO

To un-install either the demo or a full version go to **Start>Settings>Remove Programs** and select the program from the list. Follow up with a soft-reset of the device.

Business PRO Feature Overview

Group Email and Group SMS capabilities enable you to easily send text messages and emails to groups of contacts. Easily create and maintain groups.

Advanced Phone Profiles - Fully customizable profiles let you group and personalize Call Filtering, SMS Answering Machine, Ringtone, SMS Tone, Ring Volume Ring Type, SMS Volume, SMS Type, Bluetooth, Phone Radio and phone Sound settings.

Call Filter enables Complete Privacy - Automatically Reject or Hang Up unwanted callers, groups and unknown or private numbers.

Ringtone Manager - Easily assign Distinctive Ringtones to contacts, categories and unknown and private callers.

SMS/Email Tone Manager - Easily assign Distinctive SMS and Email sounds to contacts, categories and text messages from unknown numbers.

VIP Email Notifications - always know when you get an email from an important person. 5 different vibrations can be specified.

Automatic Profile Scheduler - take full control of your phone and incoming calls by automatically switching profiles based on your schedule (based on hours, days and/or meetings in your calendar).

Automatic Profiles detect meetings and appointments and automatically switch phone settings when appropriate—multiple meeting triggers.

Timed Temporary profiles enable you to switch to a certain profile temporarily (silent for 2 hours when in a cinema for example), automatically switching back after the time passes.

Advanced SMS Answering Machine - Automatically Reject and send an SMS message to callers notifying them you're busy or set it to SMS Answer missed calls. Quickly pick pre-defined or previously used SMS Replies.

Advanced Photo Caller ID Technology. Clearly see who is calling - Full Screen, Large Text and Business Photo Caller ID technology uses large pictures/text for caller id information.

Incoming SMS notification with SMS Picture ID. See the picture of the SMS sender as the message arrives.

Never loose your contact to photo associations and assign many photos to contacts at once with SmartName,

Assign photos to contacts easily by choosing photos taken by the phone's camera, transferring photos from your PC or using Outlook pictures.

Crop and adjust contact photos directly on the phone with the awesome photo Adjust Engine

Full integration with the Outlook contact database lets you view, create, edit, delete and duplicate contact information.

International Photo Caller ID support with intelligent Caller ID matching and number formatting.

Set specific ringtones per profile with Ringtone and SMS tone overrides.

Compatible with Windows Mobile 6.1/6, Windows Mobile 5 devices including devices with square screens, VGA screens, WVGA screens and landscape mode operation.

Business PRO—Quick Start Guide

Windows Mobile Today Screen with Touch Flo

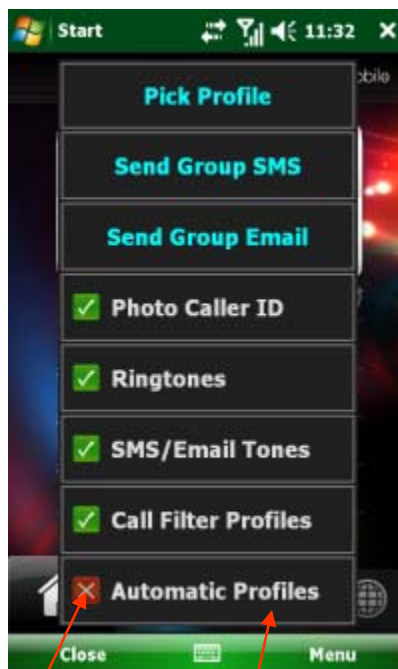

Profile Picker Button

Tap once to open the Profile Picker to switch profiles or Tap-and-Hold to open Business PRO.

Right Icon—shows currently active profile.

Business PRO's main interface

Tap to enable or disable features

Tap to open Managers

Advanced Privacy

With Automatic Profiles and Call Blocking, Business PRO adds real intelligence to your phone.

You can now easily set your phone to (for example):

- Automatically Reject all callers except your family members at night
- Automatically switch to Vibrate or Silent during a meeting and/or allow only certain callers when you are in certain meetings
- Automatically hang-up or reject unwanted callers
- Conserve battery power by automatically switching Bluetooth off when you're at your office or in a meeting (based on your daily schedule)

Full Control

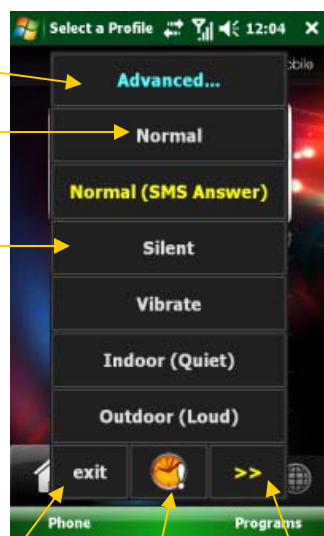

Business PRO includes a Profile Picker which will greatly improve your mobile experience.

Now you can easily switch phone profiles right from the Today Screen with your finger.

Take control of your phone easily—Advanced automatic, scheduled and temporary profiles are at your finger tips.

Group SMS and Group Email

Business Pro enables you to easily send Group SMS and Group Email Messages. The SMS/Email Group managers let you manage multiple SMS and Email groups (distribution lists).

- To create a new SMS group (distribution list), tap **Send Group SMS** to open the SMS Group Manager.
- To create a new Email group (distribution list), tap **Send Group Email** to open the Email Group Manager.

Group SMS manager

Common Actions

- To quickly send a Group SMS, tap **Send Group SMS** in the main menu, select a group and tap **Next**. Verify that the group you wish to send the message to is correct and press **Send** to compose a new SMS message.
- To quickly send a Group Email, tap **Send Group SMS** in the main menu, select a group and tap **Next**. Verify that the group you wish to send the message to is correct, select to use either the **To** or the **Bcc** email field for the distribution list and press **Send** to compose a new Email message.

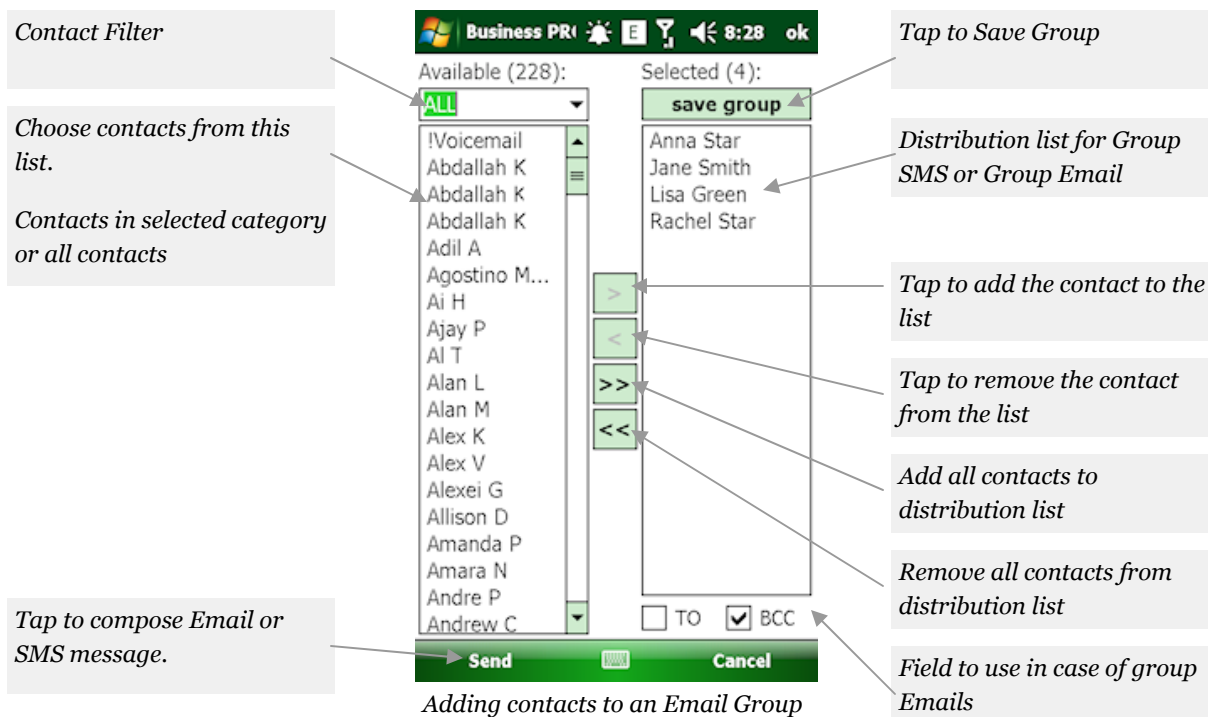

SMS/Email Group Managers

>> To create a new group, tap the **New** button in the Group Manager. This will open the group creation window.

>> To edit the selected group, tap the **Edit** button.

>> To rename a group, tap **Rename**, enter a new name and tap **Save**.

>> To delete a group, select a group and tap **Delete**.

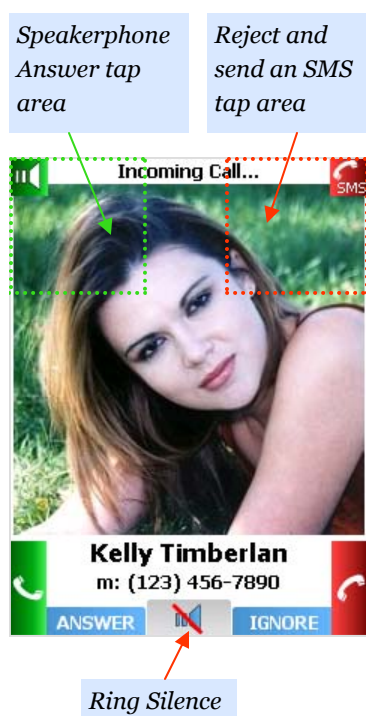

Advanced Photo Caller ID and SMS Picture ID—Overview

Business PRO features advanced Photo Caller ID technology that works by displaying a large, easy to see photograph of the person during an incoming call. It also enables additional features—Ring Silence, Speakerphone Answer and Reject+SMS.

The program will intelligently match the phone number of the caller to your Outlook contact database. The name and phone number of the person calling is displayed together with the photo of the caller. There are five Photo Caller ID modes offered by Business PRO:

1. **Full Screen Photo Caller ID** displays a large, clear photo of the caller and their name and phone number.
2. **Business Photo Caller ID** displays a medium sized picture along with the name, title and company name of the incoming caller using large text for easy readability.
3. **Large-Text Photo Caller ID** uses extra large text for caller id information.
4. **Large-Photo Caller ID** shows a photo filling the screen (for best results use SmartName to assign a photo matching your screen resolution eg. 240x320 or 320x240).
5. **Standard Picture Photo Caller ID** displays a picture bigger than what is regularly shown without Business PRO using the regular Caller ID bubble.

SMS Picture ID shows a picture of the SMS sender on the right side of the incoming SMS message bubble. This feature can be enabled/disabled by going to **Menu>Options [CallerID]**.

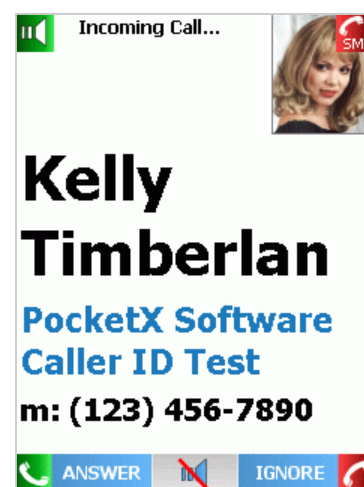

Full Screen Photo Caller ID

TIP: Our Photo Caller ID technology adds 3 new buttons—Ring Silence, Speakerphone and Reject+SMS can be pressed during an incoming call.

Business Photo Caller ID (black)

Large-Text Photo Caller ID

Large-Photo Caller ID

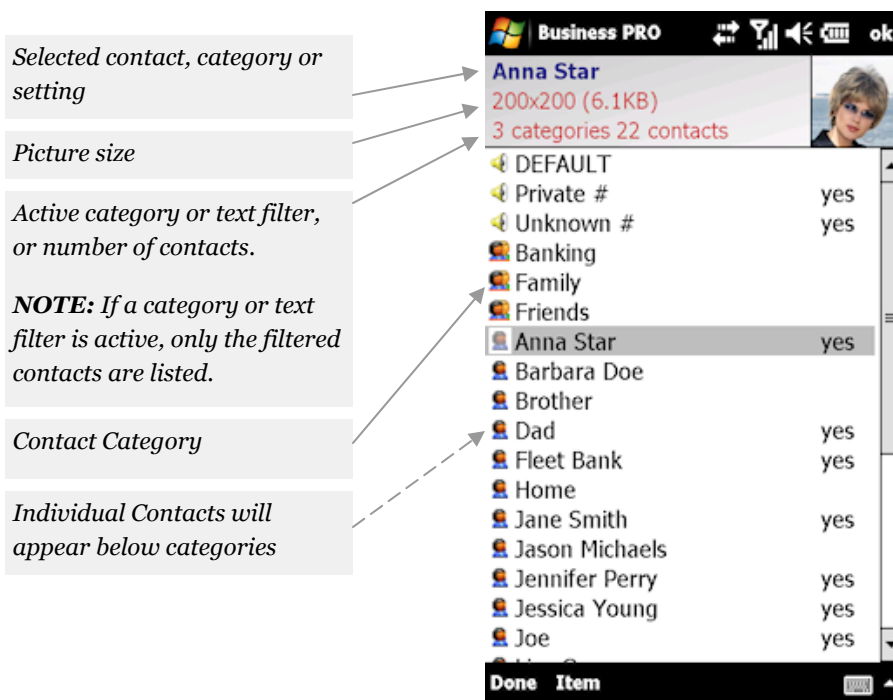

Full Screen (Black Theme)

The Photo Manager

Business PRO features a photo manager that can be used to assign photos to contacts and categories (groups of contacts) as well as assign Caller ID pictures for Default, Private and Unknown callers.

To assign a picture, open the Photo Manager (tap **Photo Caller ID** in the main menu) select a contact and tap **Item>Assign**. Browse to the folder where your pictures are stored (or where the camera stores photos on your device—this is most likely the \My Documents\My Pictures folder). Once you have selected a picture, you will be able to crop it.

Cropping a picture

Business PRO allows you to crop contact pictures during the assignment process or from the Photo Manager (via **Item>Adjust**).

To crop a picture, tap and drag the stylus over the photo to select an area that you wish to keep for the contact's picture.

The resulting photo will be previewed on the top-right of the screen. Once you are satisfied with the selection, tap the **Save** button.

DEFAULT

This setting allows you to assign a default caller id photo for all callers that have no picture assigned.

Private

This setting allows you to assign a caller id photo to private calls (i.e. Incoming calls without a phone number).

Unknown

This setting allows you to assign a caller id photo to Unknown callers (i.e. Incoming calls with the phone number not listed in the contact database).

Categories

Assigning a picture to a category will assign the same picture to all contacts in that category.

Contacts

You can assign individual contact pictures here in the Photo Manager.

Once you select an item to assign a photo to, press **Item>Assign** to open the photo browser and find a picture.

Alternatively, press **Item>Adjust** to crop the picture, **Item>Zoom** to view the picture or **Item>Remove** to delete the contact picture.

NOTE: Individual contact pictures supersede pictures assigned to contact categories. If a contact belongs to more than one category, the picture assigned to the first category (in alphabetical order) will be shown for the contact.

Distinctive Ringtones—The Ringtone Manager

The ringtone manager (**Select Ringtones in main menu**) enables you to easily take care of all distinctive ringtone assignments on the phone and assign the Default ring, ringtones per contact, ringtones for private and unknown numbers and contact categories.

The screenshot shows the 'Ringtone Manager' screen. At the top, it displays 'Default Ringtone' with 'Current: guitar1.wma' and 'Last Assigned: kilimanjaro.mp3'. Below this, it shows '3 categories 22 contacts'. A list of categories and contacts follows, including 'DEFAULT', 'Private# (no num...)', 'Unknown# (no en...', 'Banking', 'Family', 'Friends', 'Anna Star', 'Barbara Doe', 'Brother', 'Dad', 'Fleet Bank', 'Home', 'Jane Smith', 'Jason Michaels', 'Jennifer Perry', and 'Jessica Young'. On the right side, there are three buttons: 'Assign' (green), 'Remove' (red), and 'Use Last' (blue). At the bottom, there is a 'Done' button and a play icon.

Annotations on the left side:

- Selected contact, category or setting
- Active category or text filter.
- *If this is enabled only the filtered contacts are listed.
- Default ringtone
- Private number ringtone
- Unknown number ringtone
- Contact Category
- Individual Contact
- Play (preview) sound

Annotations on the right side:

- Opens the ringtone file browser
- Removes the ringtone association
- Uses the last sound for the selected list item

Ringtone sound Preview

The Ringtone Manager can preview (play) your custom ringtones. To preview a ringtone, select an item in the list and press the play menu icon.

Group Settings

DEFAULT:

This is the default Ring Tone that will play when a contact or a category does not have a ringtone assigned. This setting also reflects and changes your phone's default ringtone.

PRIVATE:

This ringtone will play for private numbers when incoming caller ID information is hidden or not available.

UNKNOWN:

This setting is for a ringtone that plays when an incoming call is from a number not listed in the contact database.

Tip: Want better ringtones? Get 20% off our original High Quality rings at www.pocketx.net/store. Use promotion code RING20 at checkout.

Note: Individual contact ringtones will supersede ringtones assigned to contact categories.

Distinctive Ringtones—Assigning Ringtones

Business PRO enables you to assign distinctive ringtones to contacts, contact categories and unknown and private callers on your phone. By default, continuous ringtones (pause between rings is removed) are enabled—you can disable this feature in Menu>Options.

Assigning a distinctive Ringtone

*To assign a ring tone to a contact, open the Ringtone Manager (see previous page), select a contact and press the **Assign** button. This will open the Ringtone Browser that lets you find a ringtone anywhere on your device or a memory card.*

Note: *Ringtones that come bundled with phones are stored in the \Windows\ folder on the device.*

*Once you have located the desired ringtone, press **Select** to complete the process. You can also preview rings by tapping on the **Play** button.*

Once the Ringtone is associated with the contact you will see the tone association in the Ringtone Manager. When that contact calls you, their ringtone will sound.

Supported Ringtone file formats

Business PRO lets you assign many file formats but their use for ringtones is device dependent.

Ringtones—Windows Mobile 5/6 devices support MP3, MP4, MP3-DRM, WMA, WAV and MID ring tones. Older Pocket PC 2002/2003 devices support .WAV, .MID and .WMA tones.

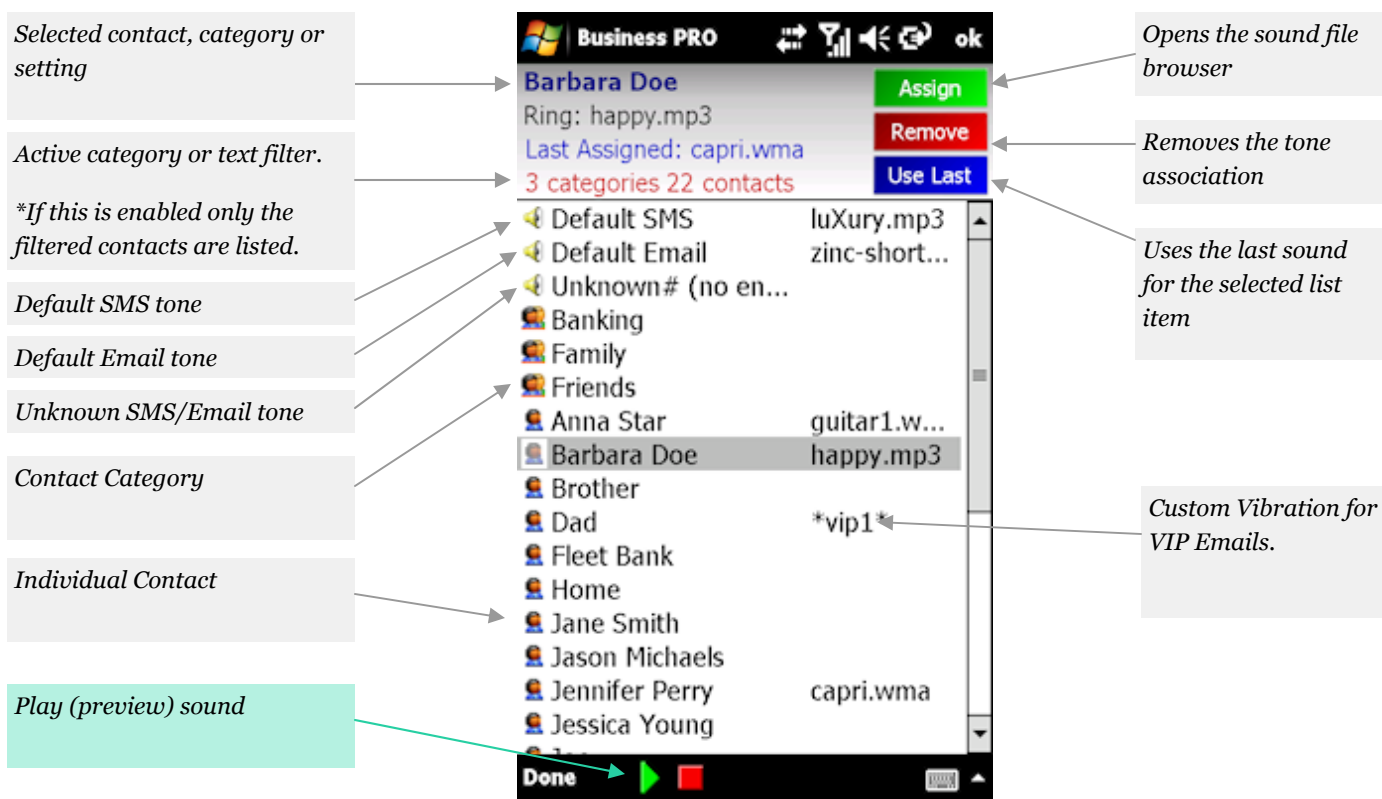

A note about ringtone storage locations

*While memory cards can be used to store ringtones and sounds, we strongly recommend using the **built-in-storage memory (or file store)** on the device. This will ensure that sound files are always available when they are needed.*

Memory cards have slow wake-up time problems on most Windows Mobile devices if the device is in standby mode and a new call comes in.

Distinctive SMS/Email Tones—The SMS/Email Tone Manager

The SMS/Email tone manager (**Select SMS/Email Tones in main menu**) enables you to easily take care of all distinctive SMS and Email tone assignments on the phone and assign the Default SMS tone, Default Email tone, SMS and Email tones per contact, SMS/Email Tones for unknown senders and SMS/Email tones for contact categories.

Group Settings

Default SMS:

This is the default SMS Tone that will play when a contact or a category does not have a custom tone assigned.

Default Email:

This is the default Email Tone that will play when a contact or a category does not have a custom tone assigned.

Unknown:

This setting is for both SMS and Email tones that plays when an SMS/Email is from a number/email not listed in the contact database.

Tip: Want better SMS Tones? Get 20% off our original High Quality rings at www.pocketx.net/store. Use promotion code RING20 at checkout.

Note: Individual contact SMS and Email tones will supersede tones assigned to contact categories.

SMS/Email Tone sound Preview

The SMS/Email Tone Manager can preview (play) your custom tones. To preview a sound, select an item in the list and press the play menu icon.

Assigning SMS/Email Tones and VIP Email Notifications

Assigning a distinctive SMS/EMail Tone

The same sound is used for both distinctive SMS and Email tones, per contact.

*To assign an SMS/Email Tone to a contact, open the SMS/Email tone Manager (see previous page), select a contact and press the **Assign** button. This will open the Sound Browser that lets you find a tone anywhere on your device or a memory card.*

Note: Sounds that come bundled with phones are stored in the \Windows\ folder on the device.

*Once you have located the desired sound, press **Select** to complete the process. You can also preview sounds by tapping on the **Play** button.*

Once the SMS/Email tone is associated with the contact you will see the tone association in the SMS/Email tone manager. When that contact sends you an SMS or Email, their tone will sound.

Assigning a VIP Email notification

With VIP email notifications, you will be notified with a specific vibration when you get an email from a selected contact.

*To assign the VIP email notification to a contact, open the SMS/Email tone Manager (see previous page), **tap-and-hold on a contact**, select **Special** and select one of the vibration options.*

*Once the VIP notification is associated with the contact you will see the association in the SMS/Email tone manager in the form of *vip#. When that contact sends you an Email, the phone will vibrate in a specific way.*

You can preview the special vibration you associated by selecting a contact and pressing the Play button after the association is made.

Note: The VIP vibration will happen every time the Email application checks for new email and if there is an un-read message from the VIP contact in the list. VIP vibrations can be up to 30 seconds long.

Supported SMS/Email tone file formats

Business PRO lets you assign many file formats but their use for email/sms tones is device dependent.

SMS/Email Tones—Windows Mobile 5/6 devices support MP3, WMA, WAV and MID SMS tones. Older Pocket PC 2003 devices only support .WAV tones.

Tip: For best performance, short sounds should be used for SMS/Email tones—up to 10 seconds in length is recommended. For ringtones, use sounds up to 30 seconds long.

A note about sms/email tone storage locations

*While memory cards can be used to store email and sms tone files, we strongly recommend using the **built-in-storage memory (or file store)** on the device. This will ensure that sound files are always available when they are needed.*

Memory cards have slow wake-up time problems on most Windows Mobile devices if the device is in standby mode.

Advanced Profiles—Overview

Business PRO enhances your mobile experience with advanced phone profiles that combine phone Sound Settings (for Ringtone volume/type, SMS tone volume/type and system volume) with Call Filtering, SMS Answering Machine and Bluetooth switching. They can be enabled or disabled and are used standalone or as a basis for automatic or temporary profiles.

The program includes a pre-defined set of profiles that are fully customizable by the user.

Running Profiles

Advanced profiles are enabled by default and can be run manually, Automatically or in Temporary mode. Advanced profiles enhance the standard built-in phone profiles.

Switching Profiles

Profiles are switched by selecting them from the phone's Today Screen (using the Profile Picker) or from inside Business PRO.

Customizing Profiles

*To customize profiles, open the Profile Manager by pressing **Call Filter Profiles** in the main menu in Business PRO.*

Renaming Profiles

*To change the name of a profile, open the Profile Manager, then press **Profile>Rename Profile** and enter a new name.*

Automatic Profiles

Automatic profiles use Advanced Profiles and change them automatically based on a timed schedule, or by tracking meetings and appointments in your calendar.

*To specify a schedule and create a new automatic profile, use the AutoProfile Manager by tapping on **Automatic Profiles** in the main menu in Business PRO.*

See the Automatic Profile section for more information about creating automatic profiles.

Temporary Profiles

Temporary profiles are very useful when you need to quickly set your phone in a specific state for a limited period of time. See the Temporary profile section for more information.

Important Note about Call Filtering and Profiles:

If Profiles are enabled in Business PRO, the active Profile settings will override all ring type, volume and system volume settings on the phone if so configured.

Tip: Profiles are selectable by tapping on the Profile Picker button at the middle-bottom of the Today Screen.

Pre-defined regular Profiles

Normal—this profile will set the phone to medium volume.

Normal (SMS Answer)— Enables the SMS Answering machine to send an SMS message to missed callers

Silent—this profile sets all incoming calls/SMS to silent.

Vibrate—this profile sets all calls/SMS to vibrate.

Outdoor (Loud) —this profile sets volume for all calls/SMS to Loud and Vibrate, suitable for outdoor use

Indoor (Quiet) —this profile sets the volume to 1, suitable for indoor use.

Meeting—this profile is by default set to Vibrate for all calls and is fully customizable to allow or disallow certain callers.

Family Only—this profile can be customized by the user to reject all calls except Family members. To use this profile, assign the “Family” category to your family contacts, then inside the Profile Manager, set REJECT for DEFAULT and BYPASS for the Family category.

Reject All Calls—this profile is set to reject all incoming calls (and forward to voicemail if available).

Reject Unknown—this profile will reject only unknown and private callers.

HangUp Unknown—this profile will hang up only unknown and private callers.

Reject (SMS Answer) —this profile will reject all calls and send an SMS message to the callers.

Flight Mode—this profile disables the phone and Bluetooth radios to extend battery life.

Bypass —if this profile is selected, Business PRO will not set sounds or call filtering on the phone.

Pre-defined Automatic Profiles

Silent Sleep—this profile is set to only allow your Family members to call during night hours. The rest of the time the phone will run the Normal profile.

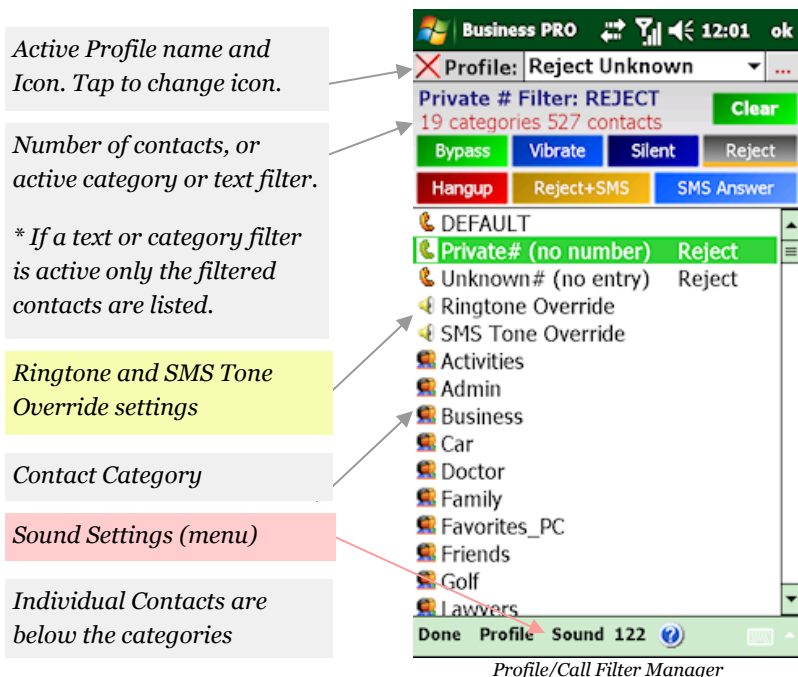

Auto Meeting—this profile is set to track your calendar and apply the Vibrate profile when it detects a meeting has started.

Sample WorkWeek—this profile shows an example of a full daily schedule.

You can easily customize the above profiles to suit your needs. You can also create your own new profiles.

Advanced Profiles, Call Filtering and SMS Answering Machine

Profiles combine phone Sound settings, SMS Answering and Call Blocking/Filtering that can be applied to contacts, categories and private and unknown numbers. To open the Profile/Call Filter Manager, tap **Call Filter Profiles** in the main menu.

Common Actions

>> To switch to a different profile tap on the pull-down arrow next to the Active profile's name.

>> To change the ring volume setting of the profile tap **Sound>Ring Volume**.

>> To change the ring type setting tap **Sound>Ring Type**.

>> To change the name of the selected profile, tap the **[...]** button and enter a new name. Then tap **[OK]**

>> To clear all settings inside a profile (including the name), tap **Profile>Clear Settings**. A profile will not appear in the main profile list until a new custom name is assigned.

Call Filter Settings

REJECT: The call is automatically rejected and the caller is sent to Voicemail (red x icon)

HANGUP: The call is automatically hunged up (caller just hears a 'click' as if the line did not exist)

SILENT: The call is permitted to come through but the ring is silent (blue x icon)

VIBRATE: The phone vibrates (V icon)

REJECT+SMS: The call is automatically rejected and an SMS message is sent to the caller.

BYPASS: The call is allowed to bypass the call filter in case of a DEFAULT setting (no icon shown)

Note: Call Filter supersedes Sound Settings.

SMS Answering Machine

This feature can be enabled by applying the Reject+SMS or SMS Answer setting. Tap **Profile>SMS Answering** to change the message text.

Reject+SMS—the call is automatically rejected and a custom SMS message is sent to the caller.

SMS Answer—a custom SMS message is sent to the caller if the call is missed.

Sound Settings

Profiles can also control Sound Settings on the device. Tap the Sound menu to change them:

RING VOLUME: Off-1-2-3-4-Loud, Bypass*

RING TYPE: Ring, Ring Once, Increasing Ring, Vibrate, Vibrate and Ring, Vibrate then Ring, Bypass*.

SYSTEM VOLUME: Off-1-2-3-4-Loud, Bypass*

SMS VOLUME: Off-1-2-3-4-Loud, Bypass*

SMS TYPE: Sound, Vibrate, Vibrate twice, Vibrate then Sound, Vibrate and Sound

Note: If Bypass (*) is set, Business PRO uses the regular settings set by Start>Settings>Phone options.

Ringtone and SMS Tone Override

This feature enables one ringtone one SMS Tone to be assigned to each profile. This will override the Ringtone and SMS Manager and will be used for all callers. This is most useful when a profile is used in Temporary mode.

Power Saving Features

Bluetooth and Phone Radio can also be controlled via a profile saving precious battery power. Tap on the Profile menu to set these options.

Automatic Profile Manager and Scheduler

Automatic Profiles allow you to take full control of your phone and incoming calls by automatically switching profiles based on your schedule (based on hours, days and/or meetings in your calendar). Automatic Profiles can detect meetings and appointments and automatically switch profiles when appropriate.

The AutoProfile manager makes it easy to specify a schedule that Business PRO will follow. To open the AutoProfile Manager, tap **Automatic Profiles** in the main menu in Business PRO.

Advanced Profile Name

Week Days

Green bar shows that a setting is the same across week days.

DEFAULT setting is active during un-scheduled time.

MEETING setting is used to trigger a profile change based on appointments and meetings your calendar.

Scheduled Timed Profile Changes.

AutoProfile Scheduler

Select a profile to apply at this time.

Select a time when the profile is active

Select days when setting is active

Select settings that apply to meetings

Limit meeting scheduler to apply to meetings with assigned categories or text in subject line. Separate multiple categories with comas.

Editing a timed/meeting setting

Common Actions

The program includes a pre-defined set of auto-profiles that are fully customizable by the user.

>>To switch to a different profile tap on the pull-down arrow next to the profile's name.

>>To change the name of the selected profile, tap the [...] button and enter a new name. Then tap [OK] to save the new name.

>>To add a new scheduled profile change tap **Item>Add Item**.

>>To assign an automatic profile to respond to your Meetings, select Meeting and tap **Item>Edit Item**.

>>To assign a profile to the DEFAULT setting (used when no other profile is active) tap on DEFAULT and select **Item>Edit Item**.

>>To clear all settings inside a profile (including the name), tap **Profile>Clear Settings**. A profile will not appear in the main profile list until a new custom name is assigned.

Note: Meetings will override scheduled profile settings if they happen at the same time.

Note: Meeting2,3+ - additional meeting triggers can use a specific meeting category or text in the meeting subject to trigger a profile change. These will supersede the first meeting trigger.

Temporary Profiles

Temporary Profiles (Temp Profiles) are very useful when you need to quickly set your phone in a specific state for a limited period of time.

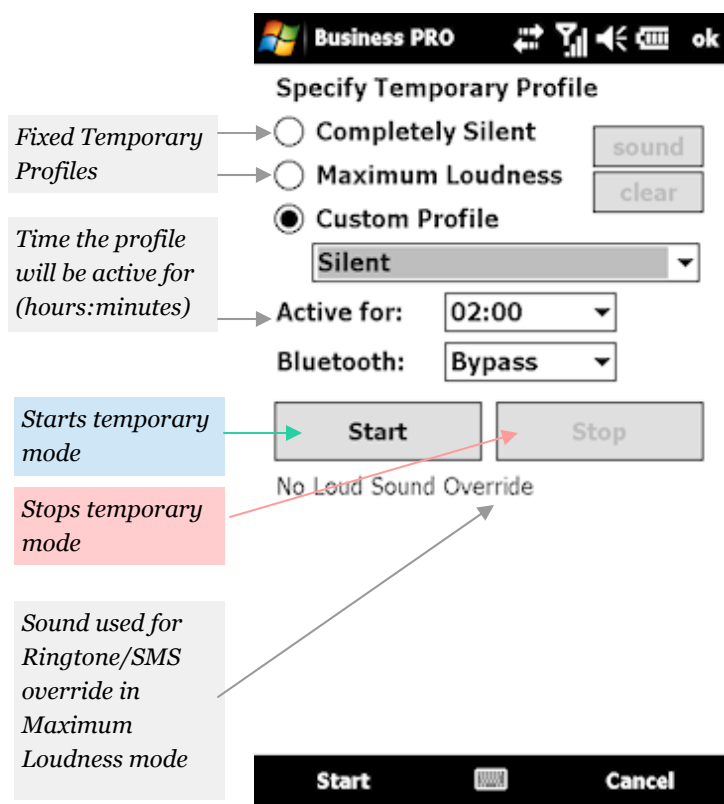

Any profile can be set to Temporary mode—in this mode, the profile will be active for a specified amount of time (example, for 2 hours). When the time expires Business PRO will switch back to the profile/mode that was active before temporary profiles were activated.

Examples of Temporary profile use:

- You're going to a movie theater and want the phone to be silent for 2 hours and then automatically switch back to loud after the movie is over
- You're at a party and want the phone to be extremely loud for 3 hours and use the loudest ringtone that you have
- You're in a non scheduled meeting and wish to silence your phone for 1 hour

Enabling a Temporary profile

The easiest way to enable a temporary profile is to tap on the Profile Picker button and then tap **Advanced>Temp Profile**. This enables you to select from a variety of pre-defined temporary profiles. If you wish to specify a completely custom temporary profile tap **Custom**. This will open the Temporary Profile Window shown below.

Temporary Profile window

Sound: Sets sound override—one ringtone used for all incoming calls

Clear: Clears sound override

Temporary Profile Window

This window allows you to specify the temporary profile, the time the profile will be active for and sound overrides. You can choose between 2 fixed profiles or pick one of the regular profiles.

Completely Silent

This is a fixed profile that will silence all sounds on the device

Maximum Loudness

This is a fixed profile that sets the ring tone, the SMS tone and other sounds to maximum loudness. Tapping the **Sound** button allows you to set a sound that will be used for the ring tone and the sms tone when this profile is active (in case you wish to use a specific loud sound overriding all other ringtone/sms sound settings on the phone)

Custom Profile

The list allows you to pick one of the regular profiles to be used in temporary mode.

NOTE: When temporary profiles are active automatic profiles are disabled until the time expires.

Multiple ways to assign contact photos

There are four ways to assign contact photographs with Business PRO:

[1] MANUAL ASSIGNMENT with the Photo Manager on the phone

If you already have pictures on the phone (or if the device has an integrated camera) open the Photo Manager, select a contact and tap Assign. Browse to the folder where your pictures are stored (or where the camera stores photos on your device—this is most likely the \My Documents\My Pictures folder).

[2] SMARTNAME

The best and fastest way to assign many large, clear photos is the SmartName method. This is as easy as cropping and naming your photos on your desktop computer and then transferring them onto the phone. This method allows you to assign many large and clear pictures easily. See the SmartName section for more information.

[3] OUTLOOK PICTURES

Business PRO will import your Outlook pictures automatically after installation (on Windows Mobile 5/6 devices). However, Outlook pictures are of low quality as Outlook resizes them to a small size (72x96 pixels max) and are therefore not optimal for Full Screen Photo Caller ID. Once you get more familiar with the program, we recommend assigning large, clear pictures by using the SmartName method.

- Individual pictures are automatically assigned to Outlook when assigned in Business PRO. To export all existing Photo Contacts pictures to Outlook tap the Export Photos to Outlook button in Menu>Options.
- You can always import/export photos from Outlook manually by going to Menu>Options in the program.

[4] COPY FROM COMPUTER THEN ASSIGN

First re-size then copy photos from your desktop/laptop computer to your phone via Activesync/Windows Mobile Device Center. Assign them in Business PRO by using the Photo Manager.

TIP: *If you wish to crop and resize your contact pictures on your PC for SmartName, we recommend using the very good and easy to use IrfanView photo viewer/editor (www.irfanview.com) for the resizing task.*

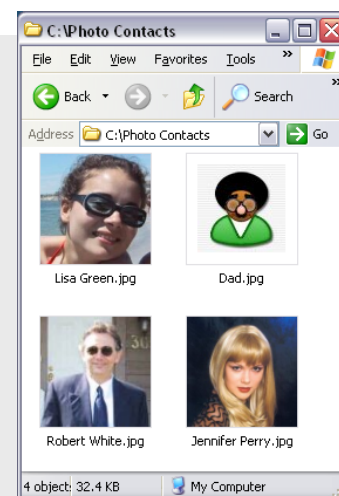

SmartName

In addition to using Outlook pictures or manually assigning phone camera photos to contacts on your phone, Photo Contacts and Business PRO feature the PocketX exclusive SmartName™ method for automatically associating pictures with contacts.

Why use it? To get clear pictures and assign pictures fast!

With SmartName you can easily assign many large, clear photos to contacts using your desktop computer, and you need to do this only once! If you ever hard-reset your phone, upgrade, get a new phone or your device loses its data, all you do is copy your contact photos from your desktop to the mobile device (or insert the memory card) and you're done! Business PRO automatically re-assigns the pictures when it loads.

SmartName eliminates the need to manually assign photos on the phone enabling you to keep a backup copy of contact pictures for future use. It also enables you to use clear, high-resolution pictures.

SmartName Instructions

1. **Crop and save your contact pictures** in JPG format and into one folder on your desktop computer. Limit the size of the photos to a square, approximately 200x200 pixels, for best performance.
2. **Name the picture files** in the same way your contacts are named in Outlook and in the following manner:

<First Name>[SPACE]<Last Name>.jpg or

<Company Name>.jpg

Examples:

- If the person's name is "John Doe", then call the image file "John Doe"
- If the person's first or last name is "Dad", then name the image file "Dad"
- If only a company name is defined use the company name, eg. "Microsoft"

Continue this procedure for all the contact photos you wish to add.

3. **Connect your mobile device** to the computer and click on Explore in Activesync to browse folders on the phone
4. **Copy all of your contact photos** from the above photo folder on the computer to one of the following folders on the phone:

\My Documents\Photo Contacts

This is the DEFAULT contact photo directory if you wish to store your photos in the phone's internal memory (Photo Contacts will by default look for your photos here). Recommended.

\Storage Card\My Documents\Photo Contacts

This is the contact photo directory used if you wish to store your photos on a memory card. If you chose to keep your contact photos here, go to Menu/Options in Photo Contacts and select this new Photo Location by tapping on the <> arrows.

IMPORTANT: Images should be in JPG format. Please make sure you're not adding a double ".jpg" extension to your files in Windows. Open My Computer and click on Tools>Folder Options>View. Make sure that the "Hide extensions for known file types" is NOT checked so that you can see file extensions.

Congratulations! Open Business PRO, go up/down and the new photos will be picked up automatically.

Program Options—General

Press **Menu>Options [General tab]** in the program to access these options.

Theme

The theme (skin) used in the program. The program ships with multiple skins. Press the [...] button to preview themes.

Photo Location

Business PRO automatically stores all contact photographs in the “Photo Location”.

You can select Internal Memory, Built-in-Storage (File Store) or storage cards if any are plugged into your device. In addition, you can specify a custom photo folder if required by tapping in the box below the selection combo box and entering a custom folder.

NOTE: If you use the SmartName method of assigning photos to contacts, this is where you would copy your photos to.

Load Program on Startup

If this option is checked (default) Business PRO will automatically launch itself a few seconds after a Pocket PC soft-reset is performed.

Note: Business PRO runs as a hidden process and will not show up in the Running Programs list. When the program is running, a small Tray icon will be visible in the Pocket PC's Today screen.

Show Profile Picker Button

Checked by default, this option enables the Profile Picker button on the bottom middle of the Today Screen. The Profile Picker enables you to quickly switch profiles with your finger.

Note: Business PRO needs to always run in the background to manage Ringtones, Photo Caller ID, Call Filtering and Phone Profiles. When the program is running, a small tray icon is by default visible at the bottom of the Pocket PC's Today Screen.

Import photos from Outlook

Pressing this button will run a utility that can import pictures from Outlook (Windows Mobile 5 and Windows Mobile 6+ devices only). You can choose to be prompted to overwrite existing pictures.

Export Photos to Outlook

Tapping on this button will enable you to export Photo Contacts pictures into the Outlook contact database (Windows Mobile 5/6+only). This is most useful if you use SmartName or manual assign mode to assign pictures to contacts and wish to then copy pictures to Outlook.

Program Options—Caller ID

Photo Save Resolution

Photo Contacts automatically re-samples contact pictures when they are assigned via the Photo>Assign function. This setting determines the resolution used when the program saves the image. Contact photos are saved in the Photo Location folder (defined in the General tab).

Enable Photo Caller ID

This option will enable the Photo Caller ID engine and set it to a desired mode:

- *Standard Picture*—uses a small picture for Photo Caller ID overlapping the incoming call bubble
- *Full Screen Normal*—uses a full-screen large picture and large Answer/Ignore buttons
- *Full Screen Large*—uses a full-screen large picture with smaller Answer/Ignore buttons (most useful for square screen devices)
- *Full Screen Business*—uses a full screen dialog with a medium sized picture and displays name and company information of the incoming caller with large text.
- *Full Screen Large Text*—uses a full screen dialog with a small picture but extra large-text for easy readability.
- *Full Screen Large Photo*—uses a full screen dialog completely filling the screen with the picture of the caller. Note: For best results, assign a picture using SmartName and match the picture resolution to screen resolution (eg. 240x320 pixels).

Enable Custom Ring Tones

This option enables the custom ring tone engine.

Enable Continuous Ring

Enabling this option will set your ringtones to play continuously during an incoming call without the default pause between rings.

Enable SMS Tones

Checking this option enables distinctive SMS tones defined with the SMS Tone Manager (Tools>Manage>SMS Tones).

Enable SMS Photos

Checking this option enables SMS picture ID. A picture of the SMS sender will be overlaid on top of the incoming SMS bubble.

Number Format

This setting specifies phone number formatting for incoming caller id display. Enter # to designate one digit, separate numbers with dashes or parentheses. Formatting examples:

#####

###-###

##-###

Remove Leading 0/1

Checking this option enables removal of a leading zero/one if it appears in incoming caller id.

Callwait Reject not Hangup

If this option is checked (default), the incoming second call (call waiting) will be rejected (to voicemail) instead of Hanged Up if hangup call filter is specified for the contact. Recommended for more reliable operation.

Command Line parameters

Business PRO's profiles can be controlled via command line parameters.

Syntax:

`\Program Files\Business PRO\businesspropicker.exe <param>`

Where param is:

- 1) "profile #" where # is a number of regular profile
- 2) "auto #" - # of automatic profile
- 3) "next" - to go to next regular profile

Example Windows Mobile shortcut:

100#\Program Files\Business PRO\businesspropicker.exe "profile 4"
